+ 5 credits of visual/performing arts may be waived upon the successful completion of 10 credits of a foreign language.

Choices Charter School Graduation Outcomes (“GO”s)

At Choices, while meeting academic content standards, students learn, with the guidance of staff and curriculum, to define and pursue college and career goals. Choices students:

Define Goals that align with interests and areas of strength.

Implement a Plan that is both realistic and flexible.

Make Adjustments to the plan, each year, as perspectives evolve.

Persevere, committing to the completion of each task in the plan, ultimately resulting in success!

Middle School Courses

English/ Language Arts

ENGLISH 6

Sixth grade students focus on active engagement with the text. They continue to apply their previously acquired knowledge and skills in a more sophisticated way. Students are required to analyze, identify, define, explain and critique rather than to merely understand, describe, use, know and distinguish. Instruction continues in spelling, grammar, and writing conventions, with the goal of improved writing for a variety of purposes and in a variety of forms.

ENGLISH 7

In English 7, students will make a distinctive transition from the English skills they have learned in earlier grades. Students will be expected to have mastered fluent reading of both narrative and expository text as well as have completed the transition from learning to read to reading to learn. The seventh-grade standards are more sophisticated than those for previous grades. Students are expected to identify and trace the development of an author's argument, write persuasive essays and argue using well-articulated evidence, and analyze characterization. Curriculum can be modified to challenge advanced learners.

ENGLISH 8

The English/language arts standards for eighth grade signify the readiness required of students preparing for the secondary content. They represent an important culmination of curriculum activities emphasized throughout grades four through eight. The curriculum in this course covers the approved California State standards and prepares students for annual state testing. Curriculum can be modified to challenge advanced learners.

Mathematics

MATHEMATICS 6

In this course students will study the topics of Number Sense and Operations, Algebra and Functions, Geometry and Measurement, Data, Statistics and Probability and Mathematical Reasoning. Students will explore the mathematics and their application to the real world.

MATHEMATICS 7/8

This course is designed to reinforce the basic arithmetic skills like operations with integers, decimals, and fractions. Other topics include the following: order of operations, concept of variables, plotting numbers on a number line, comparing numbers, arranging in order, solving one-step linear equations and inequalities, and operating with absolute values. Successful completion of this class will allow student to go on to Integrated Math 1 course.

Science

SCIENCE 6 (Earth Science)

6th Grade students follow a curriculum covering the areas of plate tectonics and Earth's structures, the shaping of Earth's surface, Earth's waters, weather, energy in the Earth system, ecology, and resources. The course is delivered on-line and includes projects and activities that explore and reinforce the covered topics.

SCIENCE 7 (Life Science)

The course introduces students to the branch of science that deals with living organisms. Students will study cell biology, genetics, evolution, and the structures and functions found in living systems. A short study of Earth and life history is included to help students understand the evolution of life on earth. Physical principles in living systems are also examined to emphasize how these principles underlie biological structures and functions.

SCIENCE 8 (Physical Science)

The course introduces students to the branch of science that deals with the non-living, physical world. Students will study motion, forces, and structure of matter, reactions, the periodic table, density and buoyancy. A short study of Earth in the solar system is included to help students understand the structure and composition of the universe. The chemistry of living systems is also examined to emphasize how these principles underlie the functioning of biological systems.

Social Studies

SOCIAL STUDIES 6 (Ancient Civilizations)

In this course students learn about the people and events that ushered in the dawn of major Western and non-Western civilizations. Included are the early societies of the Near East and Africa, the ancient Hebrew civilization, Greece, Rome, and the classical civilizations of India and China. Emphasis is placed on the major contributions, achievements, and belief systems

that have endured across the centuries to the present day. Included in the course is the special significance of geography to the development of the human story.

SOCIAL STUDIES 7 (World History)

In this course students examine the geographic, political, economic, religious and social structures found in various civilizations from the Middle Ages to Early Modern times. The rise of religions such as Islam, emergence of countries such as China, Africa and Japan and the development of civilizations found in Europe, Andean areas and Meso-America will be explored.

SOCIAL STUDIES 8 (U.S. History)

In this course, students will examine the major events preceding the founding of the nation, colonization and revolution. Students will relate the significance of these events to the development of American constitutional democracy and the founding of the American political system. The impact of territorial expansion and the development of regionalism will be studied. Students will analyze the multiple causes, key events and complex consequences of the Civil War with the lasting consequences of Reconstruction. The transformation of the American economy and the changing social and political conditions in the United States in response to the Industrial Revolution will be explored.

Physical Education

MIDDLE SCHOOL PE

This course is done independently by the student with parent overview. Students will log their daily fitness activities and develop their own fitness regimen. The course requirements are for five hours of fitness activity each 5-day week. Student are expected to participate in a variety of at least 3 activities to develop cardiovascular strength and endurance, as well as muscular strength, endurance and flexibility.

Electives

Most electives at Choices are open to all students, grades 6 – 12, including art (there is a specific middle school class), and world languages (French and Spanish).

BEGINNING ART (Middle School)

Students are introduced to the basic processes and techniques used in making two-

dimensional art. They learn and apply the elements of art (color, line, form, shape, space, texture, and value) in a variety of mediums such as pencil, charcoal, pastel, and acrylic paint. Emphasis is placed on skill-building and technique. Students also learn to identify historically significant artists and their famous works. Class participation is essential and work outside of class time is required. Students may repeat this class.

High School Courses

ENGLISH/LANGUAGE ARTS

ENGLISH 9 (English 1): 5 Credits each semester (meets a-g requirements)

This course is a literature-based program that develops reading comprehension, grammar/vocabulary, written composition and critical-thinking skills. Students will learn how to use literary elements to analyze fiction, poetry, non-fiction and drama. Basic composition and research skills are stressed.

HONORS ENGLISH 9 (English 1): 5 Credits each semester (meets a-g requirements)

This course is a more intensive English 9 course with added emphasis on the study of literary topics. Geared toward the highly motivated student, the course includes a greater number of reading and writing projects highlighted by the necessity to construct more advanced essays. Added vocabulary and spelling assignments are required.

ENGLISH 10 (English 2): 5 Credits each semester (meets a-g requirements)

This course further develops students' ability to evaluate and identify literary devices in novels, short stories, poems, essays and plays. Additional emphasis is on increasing grammatical skills and expressing individual points of view. Composition is directed at the multi-level paragraph essay and various essay styles, such as narrative, evaluative and compare/contrast.

HONORS ENGLISH 10 (English 2): 5 Credits each semester (meets a-g requirements)

This course is appropriate for the more advanced student with a serious interest in English. Particular emphasis is placed upon the investigation of symbolism, alternative writing styles, and the development of the modern novel. In addition to the fundamental examples, special types of speeches are included. Students in this course can expect a significantly greater number of reading and writing assignments.

ENGLISH 11 (English 3): 5 Credits each semester (meets a-g requirements)

This course concentrates on American literature, focusing on themes characteristic of American culture and American authors. Students are required to develop interpretive and analytical levels of comprehension. As well, students are expected to further enhance the multi-level paragraph composition with an emphasis on style and developing complex sentence structure for more effective communication.

ENGLISH 12 (English 4): 5 Credits each semester (meets a-g requirements)

This course prepares students for the college-level English 1A (composition) course by incorporating research techniques, critical analysis and advanced writing skills. Through a sophisticated study of world literature, students will identify and critique authors' values and unique uses of literary devices in fiction, poetry, nonfiction and drama. Paragraph composition should reflect the students' advanced use of grammar, critical interpretation and analysis, and stylistic maturity.

AP ENGLISH LANGUAGE AND COMPOSITION: 5 Credits each semester (meets a-g requirements)

Students will become skilled readers of prose written in various periods, disciplines, and rhetorical contexts. They will gain understanding of the interactions between writers' purposes, audience expectations, and subjects. Students will have the opportunity to acquire techniques, strategies, and skills necessary to pass the AP English examination in Literature and Composition. AP English is delivered in weekly seminar classes.

AP ENGLISH LITERATURE & COMPOSITION: 5 Credits each semester (meets a-g requirements)

This course demands rigorous thinking, extensive reading, and quality analytical writing. The goal of the course is two-fold: (1) students will analyze, comprehend, and appreciate works of recognized literary merit to prepare them for college study, and (2) students will have the opportunity to acquire techniques, strategies, and skills necessary to pass the AP English examination in Literature and Composition. AP English is delivered in weekly seminar classes.

GOTHIC LITERATURE – MONSTER STORIES: 5 Elective Credits (1 semester)

Vampires, ghosts, and werewolves have lived in our collective imagination since the 18th century, and they continue to influence the world of fiction even today. Gothic Literature: Monster Stories focuses on the major themes found in Gothic literature and demonstrates the techniques writers use to produce a thrilling psychological experience for the reader. The themes of terror versus horror, the power of the supernatural, and the struggle between good and evil are just a few of the classic Gothic subjects explored in this course. Are you brave enough to go beyond the fear and find an appreciation for the dark beauty of Gothic stories?

MYTHOLOGY AND FOLKLORE: 5 Elective Credits (1 semester)

Since the beginning of time, people have gathered around fires to tell stories of angry gods, harrowing journeys, cunning animals, horrible beasts, and the mighty heroes who

vanquished them. Mythology and folklore have provided a way for these colorful stories to spring to life for thousands of years. Mythology and Folklore: Legendary Tales will illustrate how these famous anecdotes have helped humans make sense of the world. Beginning with an overview of mythology and different types of folklore, you will journey with age-old heroes as they slay dragons, outwit gods, defy fate, fight endless battles, and outwit clever monsters with strength and courage. You'll explore the universality and social significance of myths and folklore and see how these powerful tales continue to shape society even today.

WORLD LANGUAGES

FRENCH and SPANISH a-g Courses

The California State University and the University of California systems' a-g requirements state that each student must have at least two years of a foreign language to graduate. Three years is recommended to be competitive for college eligibility. In addition, as communication becomes easier for people all over the world, learning more than one language becomes not only important, but also necessary. In order for our students to be prepared to meet the challenges of the 21st century and be competitive in the global market, they must be able to read, write, and speak more than one language.

FRENCH 1: 5 Credits each semester (meets a-g requirement)

French 1 introduces students to the language, customs, history and culture of France and other French-speaking countries. Students will learn very basic reading, writing, speaking and listening skills in the present tense. The cultural portion of the course focuses on lifestyle, customs, and attitudes, as well as the geography and history of French-speaking countries. French 1 is delivered in weekly seminar classes.

FRENCH 2: 5 Credits each semester (meets a-g requirement)

This course continues students' associations with the languages, customs, history, and culture of France and other French-speaking countries. Students will build on their vocabulary and grammatical skills, as well as improve their ability to speak, write, and understand the French language. French 2 is delivered in weekly seminar classes.

FRENCH 3: 5 Credits each semester (meets a-g requirement)

French 3 further develops and refines the four language areas of reading, writing, speaking and culture. A variety of materials are used to teach the art, music, literature,

and history of foreign culture with greater emphasis on reading and writing skills. Conversational skills are further refined by the use of the target language.

FRENCH 4: 5 Credits each semester

French 4 students further develop, refine, and review the four language skills and vocabulary in preparation for college language courses. The target language is used extensively by the teacher and students in all level 4 classes. Language is used in context along with reading literary selections and writing compositions.

ADVANCED PLACEMENT FRENCH LANGUAGE AND CULTURE 5 Credits each semester (meets a-g requirements)

AP French Language and Culture is equivalent to an intermediate level college course in French. Students cultivate their understanding of French language and culture by applying interpersonal, interpretive, and presentational modes of communication in real-life situations as they explore concepts related to family and community, personal and public identity, beauty and aesthetics, science and technology, contemporary life, and global challenges. Pre-requisite: French 3 completion with grade C or higher.

SPANISH 1: 5 Credits each semester (meets a-g requirement)

Spanish 1 is a comprehensive standards-based college preparatory course that balances grammar and communication. Students learn simple, basic vocabulary and grammar, including sentence formation, the present tense of regular and irregular verbs. Students become familiar with traditions and customs of the Hispanic culture. They will gain additional practice by using online technology designed to integrate reading, listening, writing, and conversational Spanish.

Pre-requisite: none.

SPANISH 2: 5 Credits each semester (meets a-g requirement)

Spanish 2 includes a thorough review of the material learned in Spanish 1. The course is comprehensive, standards-based, and college preparatory. The course also combines learning the Spanish language with an appreciation for various aspects of Hispanic cultures around the world. Students will improve their fluency in speaking Spanish, while they learn how to conjugate irregular & reflexive verbs, possessive adjectives & pronouns, and will be able to use both the preterit and imperfect tenses while describing action in the past. They will gain additional practice by using online technology designed to integrate reading, listening, writing, and conversational Spanish.

Pre-requisite: Spanish 1 passing grade C or better.

SPANISH 3: 5 Credits each semester (meets a-g requirement)

Students in Spanish 3 will continue to expand their oral and written skills in the target language by using authentic materials, audio and video texts, writing letters, short compositions and simple paragraphs, and participating in a variety of oral and auditory exercises. The three modes of communication (Interpretative, Interpersonal, and Presentational) defined in the Standards for Foreign Language Learning in the 21st Century are foundational to this course.

Students also learn about cultural and historical figures, places and events, and symbols to broaden their cultural horizons. They will learn how to conjugate verbs in the future, conditional, present perfect and the subjunctive tenses. They will gain additional practice by using online technology designed to integrate reading, listening, writing, and conversational Spanish. Completing and presenting both group and independent projects are integral parts of the course.

Pre-requisite: Spanish 2 passing grade C or better.

SPANISH 4: 5 Credits each semester

Spanish 4 students further develop, refine, and review the four language skills and vocabulary in preparation for college language courses. The target language is used extensively by the teacher and students in all level 4 classes. Language is used in context along with reading literary selections and writing compositions.

ADVANCED PLACEMENT SPANISH LANGUAGE AND CULTURE 5 Credits each semester (meets a-g requirements)

AP Spanish Language is an intensive and rigorous course conducted in Spanish. Students are expected to use the target language consistently with the teacher and peers in class. This course requires discipline, commitment and dedication. Students in AP Spanish Language will demonstrate a high level of proficiency in understanding formal and informal conversations, lectures of different themes, oral presentations, newspapers, letters, informal e-mails, instructions, Internet articles and stories. They are able to express themselves orally by convincing, arguing, inquiring, and describing situations. Students are able to address environmental, social and political issues affecting Spanish speaking countries, considering the linguistic and cultural differences. They will use online technology designed to integrate reading, listening, writing, and conversational Spanish. Pre-requisite: Spanish 3 passing grade C or better.

MATHEMATICS

PRE-INTEGRATED MATH: 5 Credits each semester

Students explore concepts such as integers, expressions, equations, and fractions. This course provides students with a solid foundation for Integrated Math I and emphasizes the use of technology, problem solving, critical thinking, and reasoning.

INTEGRATED MATH 1: 5 Credits each semester (meets a-g requirements)

The fundamental purpose of Integrated Math 1 is to formalize and extend students' understanding of linear functions and their applications. The critical topics of study deepen and extend understanding of linear relationships, in part by contrasting them with exponential phenomena, and in part by applying linear models to data that exhibit a linear trend. Students build on their prior experiences with data, developing more formal means of assessing how a model fits data. Students use regression techniques to describe approximately linear relationships between quantities. They use graphical representations and knowledge of the context to make judgments about the appropriateness of linear models. With linear models, they look at residuals to analyze the goodness of fit. Mathematics 1 uses properties and theorems involving congruent figures to deepen and extend understanding of geometric knowledge from prior grades. Integrated pathways are supported by the Board of Admissions for the UC system, and will therefore still meet college entrance requirements.

INTEGRATED MATH 2: 5 Credits each semester (meets a-g requirements)

This course is the second course in a series of three that uses an integrated approach to cover the following domains: Number and Quantity, Algebra, Functions, Geometry, and Statistics and Probability. This course focuses on extending the laws of exponents to rational exponents, and solving and comparing the characteristics of functions, including their associated inequalities. This is a University of California (UC) approved A-G course for Mathematics.

INTEGRATED MATH 3: 5 Credits each semester (meets a-g requirements)

In the Integrated Mathematics 3 course, students integrate and apply the mathematics they have learned from their earlier courses. This course includes standards from the conceptual categories of Number and Quantity, Algebra, Functions, Geometry, and Statistics and Probability. Some standards are repeated in multiple higher mathematics courses; therefore instructional notes, which appear in brackets, indicate what is appropriate for study in this particular course. Standards that were limited in Integrated Mathematics 1 and Integrated Mathematics 2 no longer have those restrictions in Integrated Mathematics 3.

MATH MODELING A and B: 5 Credits each semester

The Math Models course applies mathematical concepts to real-life situations. Students will learn to conduct and analyze research by collecting and describing data using graphs and models that find application in disciplines as diverse as science, trigonometry, art, architecture, and music. Students will employ theoretical, empirical, and binomial probability to predict the likelihood of outcomes. Using math models, students will better understand personal finance issues including compensation, budgeting, taxes, bank accounts, and compound interest. Applying math models to analyze the pros and cons of credit cards, renting or purchasing a home, leasing or purchasing a vehicle, and investments and insurance will enable students to be smarter consumers.

PRE-CALCULUS: 5 Credits each semester (meets a-g requirements)

Prerequisite: Completion of Integrated Math 3 with a C or better. This course continues and expands with trigonometric concepts that include unit circle, radian measure, polar coordinate system, graphing and converting equations from polar to rectangular coordinate system and vice versa, graphing trigonometric equations with transformations, trigonometric form of complex numbers, De Moivre's Theorem, operations with vectors (including unit vectors and projections), and applications of everything listed above. New topics that prepare students for calculus and linear algebra include operations with matrices (determinants, inverses, row operations), solving systems of linear equations using Gauss-Jordan Elimination, Remainder and Factor theorems, Fundamental Theorem of Algebra, graphing and writing equations of polynomial functions, limits of sequences and series, partial fractions decomposition, proofs by mathematical induction, and introduction to the concepts of limits, derivatives, and integrals (area under a curve approach).

CONSUMER MATH A and B: 5 Credits each semester

This course meets graduation requirement in math. In this course, the student will learn that money is lost or gained depending upon the information a consumer has to help him or her make informed decisions. By the end of this course, the student will understand the history of money, define fixed costs and discretionary spending, understand the importance of savings, and recognize the dangers of debt. This course will ask the student to look at financial choices including spending patterns, purchasing motivations, and how to make difficult decisions. In the second semester, the student will differentiate between secured and unsecured debt, learn how to create a budget, examine a credit report, and discover the best way to increase income and decrease expenses. This course will provide the student with the skills to make good financial decisions.

SCIENCE

BIOLOGY: 5 Credits each semester (meets a-g requirements)

This is a lab science course which offers an in-depth look at the human body and its functions. Furthermore, students will study living organisms, including cellular and molecular biology, genetics, evolution, ecosystems and taxonomic organization. An **additional hour** of lab attendance each week is **mandatory** for this course. Lab work is done onsite.

CHEMISTRY: 5 Credits each semester (meets a-g requirements)

This lab science course will study the structure and behavior of matter. The course includes scientific measurement and calculation, kinetic theory, the states of matter, problem solving, atomic and molecular structure, chemical names and formulas, the periodic table and chemical properties, chemical bonding and reactions. An **additional hour** of lab attendance each week is **mandatory** for this course.

EARTH SCIENCE: 5 Credits each semester

This course covers the composition and function of Earth and its relationship to the rest of the solar system and universe. Students will study the planet's composition, surface processes, atmosphere and oceans, geologic time, resources, the environment, as well as the roles of the solar system, galaxy and universe.

PHYSICS: 5 Credits each semester (meets a-g requirements)

Students will learn physics concepts, including matter and energy, motion and force, speed, velocity, and acceleration in order to better understand how the universe behaves. A survey of the historical development of physics as a foundational branch of science will lead to recognition of the contributions of Newton, Einstein, Planck, and others. Students will apply physics concepts as they study gravity and acceleration, momentum, motion, and energy.

SOCIAL STUDIES

AMERICAN GOVERNMENT: 5 Credits (1 semester) (meets a-g requirements)

In this course, students will apply knowledge gained in previous years of study to pursue a deeper understanding of the institutions of American government. In addition, they will draw on their studies of American history and of other societies to compare different systems of government in the world today. An exploration of the American Constitution, the Bill of Rights and the principles underlying the system of checks and balances between the branches of government and the relationship between state and local government will be emphasized. Students will reflect on the responsibilities of citizenship and will be encouraged to participate in community activities. This course should be viewed as the culmination of the civic literacy strand that prepares students to be responsible citizens in a constitutional republic.

ECONOMICS: 5 Credits (1 semester) (meets a-g requirements)

This course is a study of how individuals and societies organize to meet their needs and wants. Students will take a serious look at microeconomics, macroeconomics, international economics and consumer economics, and study specific topics like the business firm, money and financing, decision-making, supply and demand, GDP, business cycles and economic growth. In this course, students will deepen their understanding of the economic problems and institutions of the nation and the world and learn to make reasoned decisions on economic issues as citizens, workers, consumers, business owners and managers, and members of civic groups.

INTRODUCTION TO LAW: 5 Credits (1 semester) (meets a-g requirements)

Students receive an overview of substantive and procedural areas of law and legal practice. They explore the legal profession, courts, ethics, sources of law, and alternative dispute resolution systems, and they analyze an application of law to factual circumstances. Introduction to Law is delivered online.

PSYCHOLOGY: 5 Credits each semester (meets a-g requirements)

Psychology is the study of interpreting human behavior. This course will explore the topics of personality and its development, abnormal behavior, intelligence, learning theories, memory and perception. Psychology is delivered online.

UNITED STATES HISTORY: 5 Credits each semester (meets a-g requirements)

In this course, students will examine major turning points in American history in the 20th century. Key concepts from 18th and 19th century history will be reviewed. During the year the following themes will be emphasized: the expanding role of the federal

government and federal courts; the continuing tension between the individual and the state and between minority rights and majority power; the emergence of a modern corporate economy; the role of the federal government and Federal Reserve System in the economy; the impact of technology on American society and culture; change in the ethnic composition of American society; the movements toward equal rights for racial minorities and women; and the role of the United States as a major world power.

AP UNITED STATES HISTORY: 5 Credits each semester (meets a-g requirements)

Pre-requisite: A recommendation from the Advisory teacher is required for placement in this class.

Woven into the chronology of this course are the key themes of American History. Issues of American identity, diversity, religion, and culture are examined. Economic transformations, the development of political institutions, and reform movements are evaluated. War, slavery, and demographic changes are assessed. Globalization and environmental issues are analyzed.

WORLD HISTORY: 5 Credits each semester (meets a-g requirements)

In this course, students examine major turning points in the shaping of the modern world, with emphasis on historical events from the late 18th century to the present. Students will examine the relationships that exist between current issues and their historical, geographic, political, economics, and cultural background. The course will cover the history of democratic principles and the role revolutions played in the development of Western political thought, the effect of the Industrial Revolution, the patterns of imperialism, the causes and course of World War I, the rise of totalitarian governments, the causes and consequences of World War II, the international developments post-World War II and the development of nationalism in the contemporary world.

HONORS WORLD HISTORY: 5 Credits each semester (meets a-g requirements)

In addition to the topics and concepts taught in WORLD HISTORY, the purpose of this course is to enable students to understand their connections to the development of civilizations by examining the past to prepare for their future as participating members of a global community.

WORLD GEOGRAPHY: 5 Credits (1 semester)

Geography presents the planet as a navigable entity. Students will study the Earth and its relationship to the universe and acquire an understanding of natural and physical systems that have shaped and continue to shape planet Earth. The ability to use geographic tools and skills will be presented. Students will gain understanding of human systems and movement and political divisions of Earth. Relationships between the Earth's physical

environment, society and culture will be explored. Students will apply geography to interpret the past and present, and to plan for the future

PHYSICAL EDUCATION

P.E. 1: 5 Credits each semester

For this course students will log their daily fitness activity. Students develop their own fitness regime and must log five hours of fitness activity each week. Students are expected to do a variety of activities cardiovascular strength and endurance as well as muscular strength, endurance and flexibility. ALL 9th grade students must attend a mandatory P.E. clinic each semester in order to receive full credit for the course.

P.E. 2-4: 5 Credits each semester

Students will log their daily fitness activity. Students develop their own fitness regime and must log five hours of fitness activity each week. Students are expected to do a variety of activities cardiovascular strength and endurance as well as muscular strength, endurance and flexibility.

HEALTH

HEALTH: 5 Credits (1 semester)

This course features a holistic approach to a lifetime of healthy, safe living. Students will study the cardiovascular system and nutrition, first aid and safety techniques, stress, and family life, including sex education. Further emphasis will be placed on the avoidance of tobacco, alcohol and drugs. Health is delivered online.

FINE ARTS

BEGINNING ART: 5 Credits each semester (meets a-g requirements)

Students are introduced to the basic processes and techniques used in making two-dimensional art. They learn and apply the elements of art (color, line, form, shape, space, texture, and value) in a variety of mediums such as pencil, charcoal, pastel, and acrylic paint. Students begin to develop the ability to recognize different stylistic characteristics of art of different cultures, time periods, and individual artists. Students learn the

vocabulary of art critiquing and develop a beginning level of analyzing art. Class participation is essential and work outside of class time is required. Students must pass this class with a grade of C or better to promote to advanced art. This class may be repeated for credit. ***Due to the nature of instruction in this course, weekly class attendance is required. Missing more than three classes may result in the student being dropped from the course.***

ADVANCED DRAWING & PAINTING: 5 Credits each semester (meets a-g requirements)

Along with the continued development of drawing and painting techniques learned in beginning art, students will add to their knowledge of the elements of art and learn about composition and principles of design. Students will work in a variety of mediums including pencil, charcoal, ink, pastels, acrylic paint, and watercolor. Students will build their art vocabulary to become better equipped to critique and analyze artwork from different cultures and time periods. Class participation is essential and work outside of class time is required. This class may be repeated for credit. ***Due to the nature of instruction in this course, weekly class attendance is required. Missing more than three classes may result in the student being dropped from the course.***

ART HISTORY: 5 Credits (1 semester) (meets a-g requirements)

Art History examines the world of western art, moving chronologically from the Italian Renaissance through Modern American Painters, examining a selection of outstanding artists of their era, including Botticelli, da Vinci, Rembrandt, Monet, Cezanne, Picasso, etc. Students learn about works of art, the artists who created them, and the times they lived in, helping students to see the context of art in its time, and draw their own conclusions as to why we value art for its own sake. Art History covers the time periods from the Italian Renaissance through the 20th century.

EARLY ART HISTORY: 5 Credits (1 semester)

Early Art History takes a global look at man and the art he has created from the beginning - Prehistoric art through to current time, including Egyptian, Greek, Roman, Pre-Columbian, Native American, African, to name a few. Students learn to make comparisons, consider influences, and see the context and breadth of human expression through the ages, the time period from prehistoric cave paintings to the 21st century.

FILMMAKING (VIDEO PRODUCTION) 1 and 2: 5 Credits each semester

Video production 1 class will learn all the elements of producing movie shorts. Students will learn script writing, storyboarding, camera techniques, lighting, audio recording and editing. Students will work in groups and individually to produce complete video

productions. Class meets weekly for 90 minutes. Time outside of class is required to ensure project completion. Video production 2 class will take these concepts to a higher quality production level with longer video projects required. This class can be repeated.

PERCUSSION 1: 5 Credits each semester

Percussion 1 is an introduction to playing drum set and hand drums. Students will learn 14 basic beats, simple fills, sticking technique, and beginning rudiments. Students will learn to read drum charts and fill notation. Drum sets and hand drums are provided in class. A drum set at home to practice on is not required, but strongly recommended. Performance at the Fall and Spring recitals is not required, but is an option for those who desire to perform. This class can be repeated and is delivered in a weekly seminar format. ***Due to the nature of instruction in this course, weekly class attendance is required. Missing more than three classes may result in the student being dropped from the course.***

PERCUSSION 2: 5 Credits each semester

Percussion 2 is for the beginner/intermediate drum set player. Completion of Percussion 1, or a minimum of 1 year drumming experience is required. Students will learn more complex beats that include intermediate syncopation and limb independence. Rudiments are continued and students will begin to incorporate rudiments into their playing. ***Due to the nature of instruction in this course, weekly class attendance is required. Missing more than three classes may result in the student being dropped from the course.***

COMPUTERS

INTRODUCTION TO TYPING: 5 Credits (1 semester)

This course focuses on the basic concepts and applications of word processing. Emphasis will be on proper keyboarding technique, with the main goal of increasing speed and accuracy in using a keyboard including numeric, keypad and alphabetic functions. Students use a basic downloadable program. Another option to this program is also offered, using an online site where students can practice typing HTML, CWSS and JavaScript.

CTE BUSINESS AND FINANCE PATHWAY

Persons trained in fields such as business management, international trade, and various financial services specialties (e.g., accounting, banking, and investing) will find that their skills are highly marketable. Students master basic business principles and procedures before proceeding to the career path specializations. The specializations emphasize concepts of accounting and finance, including computer applications, taxes, investments, and asset management as well as pathways in international business and business management. Because almost every business and organization have a financial and management component, students will find that opportunities exist in many career paths in addition to those in business and finance.

INTRODUCTION TO BUSINESS: 5 Credits (1 semester, meets a-g requirements)

Students explore business in global society, learning terminology, concepts, systems, strategies, and current issues. Topics include the business environment, ethics, entrepreneurship and global business, management, marketing, production, information systems, and financial elements.

PRINCIPLES OF MARKETING: 5 Credits (1 semester, meets a-g requirements)

Students explore factors influencing how marketing decisions are made, including the impact of marketing decisions on an organization and its customers. They gain a working knowledge of practical marketing and business vocabulary. They also evaluate how the actions of competitors influence marketing decisions in the global marketplace.

MANUFACTURING: PRODUCT DESIGN AND MFG.: 5 Credits (1 semester, meets a-g requirements)

Think about the last time you visited your favorite store. Now picture the infinite number of products you saw. Have you ever wondered how those things made it to the shelves? Whether it's video games, clothing, or sports equipment, the goods we purchase must go through a manufacturing process before they can be marketed and sold. In Introduction to Manufacturing: Product Design and Innovation, you will learn about different types of manufacturing systems as well as career opportunities, including engineers, technicians, and supervisors. As a culminating project, you will plan your own manufacturing process and create an entirely original product! If you thought manufacturing meant mundane assembly lines, this course will show you how exciting, creative, and practical this industry can be.

INTERNATIONAL BUSINESS: GLOBAL COMMERCE IN THE 21ST CENTURY 5 Credits (1 Semester, meets a-g requirements)

Imagine meeting with suppliers at an office in Europe while calling your salesroom that's back in Asia. Imagine investing in foreign markets and visiting partners in exotic locales. With the evolution of current technology, our world is more connected than ever before, and the business community today is larger than ever. International Business: Global Commerce in the 21st Century will demonstrate just how you can gain the knowledge, skills, and appreciation to live and work in the global marketplace. You will begin to understand how both domestic and international businesses are affected by economic, social, cultural, political, and legal factors and what it takes to become a true manager of a global business in the 21st century.

ADDITIONAL ELECTIVES

DRIVER EDUCATION: 5 Credits (1 semester)

Pre-requisite: Students must be 14 years of age to take Driver's Education.

This textbook driving course covers the ground rules of road and vehicle safety, with an emphasis on capable and efficient driving. Students will learn the basics of driving a vehicle, interacting with traffic, driving in various environments and climate conditions, road rules, and driver responsibility. At the end of the course, students will be issued a certificate of completion of driver's education. The student must take the certificate, which is valid for a maximum of 1 year, to the Department of Motor Vehicles (DMV) and pass the learner's permit test in order to drive. They must also show proof of being enrolled in a state-approved driving school before taking the test to get their permit. Driver's Education is delivered online.
